Full installation service

201-100 Stainless Steel Flush Fit Stud Installation

Installation

1. Drill holes 11mm & 26mm in diameter to the depths shown above.
2. Remove dust and debris caused by drilling.
3. Following the product guidelines heat the Polymer Modified Adhesive and pour a sufficient amount to fill the drilled hole.
4. Push the stud into the hole firmly ensuring an edge seal around the entire stud
5. Allow a few minutes for the Polymer Modified Adhesive to set.

Cleaning & Maintenance

This product is designed for all weather exposure requiring only minimal maintenance as detailed below.

Stainless Steel Manufactured from premium Stainless Steel. Maintenance free, inspect fixing every 6 months. Add additional adhesive where required.
